

Hints and tips on watching MadCow CreationZ videos

The video is streaming video, therefore it is loading as you watch it. The best thing to do is let it load for a while before you watch it, that way it'll be ahead of you.

There's a control bar at the bottom of the player. It's just under the logo Dash player.

The far left is play/pause, to the right of that is the time played and a bar. The blue part of the bar is what has been played. You can move this by clicking and dragging it to the left to review something you've already seen. The white part is the leader and the dark gray is what is streamed. If there is no dark gray it may have to wait until more video is loaded before it can play.

On the far right side of the control is the total time of the video, then the volume. To the right of the volume is a control for the size of the screen. You can make the video smaller on the computer screen by clicking the double arrow when it is facing left, larger when it is facing right. The control to the far right is to make the video full screen. Use the ESC key to return to original screen.
